

# LIFE SATISFACTION AMONG ENTREPRENEURS AND THE IMPACT OF EDUCATION, GENDER, AND AGE

*Paul A. Pounder*  
St. George's University

*The aim of the present study is to investigate whether education, gender, and age impact life satisfaction among entrepreneurs. I used data from the 2013 Adult Population Surveys of Global Entrepreneurship Monitor (GEM) survey and employed both linear and multiple regression in order to investigate the variables of the present study. For employees, age and education were significant predictors of life satisfaction while gender was not. On the other hand, age as well as gender and education were all significant predictors of life satisfaction for entrepreneurs. While this present empirical study focuses on the Caribbean, the present study can propel further research regarding the significance of the impact that age, gender, and education have on life satisfaction. Future research can also seek to describe gender differences, their nature, and their impact on the entrepreneurial process.*
